Education

Vellore Institute of Technology — Vellore, Tamil Nadu
Bachelor of Technology in Computer Science and Engineering — *July 2025 – 2029*

KC College — Mumbai, Maharashtra
PCM, Science — *Aug. 2023 – Jan. 2025*

Experience

Cofounder, Developer — July 2026 – Present
Tessellate Studios — *Remote*

- Built fully functional end to end e-commerce websites using React, Typescript, Next.js, Shopify, and Zod.
- Managed client relationships directly, from initial discussions through project delivery.

Technical Intern — May 2026 – June 2026
M J P T & Co LLP — *Mumbai, Maharashtra*

- Built a Python pipeline that consolidates ∼154k monthly SAP postings and reconciles them to ZFIT TDS reports
- Caught a ₹3.6 Cr TDS payable sign error before filing; independent recomputation ties to ₹0.00
- Restored ₹2.8 Cr understated taxable base; all 26.8k reconciliation rows now reproduce their tax
- Built interactive password locked monthly revenue dashboards for 2 clients, showing revenue trend and category breakdown, using React, TypeScript and Python, fed from extracted excel sheets, hosted on respective web apps.

Technical Head — Jan. 2021 – Sep. 2022
JBCN International School — *Mumbai, Maharashtra*

- Built website for senior MUN twice as a team of one which was visited by over 240+ participants

Projects

NoBroke | https://nobroke.netlify.app/ | *React, TypeScript, Supabase, PostgreSQL* — October 2026

- Combined balances across friend groups into fewer suggested payments, simplifying settlement.
- Added expense splitting and recurring-bill templates to help groups track shared costs over time.
- Protected financial updates with PostgreSQL row-level security and idempotent operations to prevent duplicate ledger changes.

DigiJain | *React Native (Expo), Next.js, TypeScript, Firebase, Cashfree* — May 2026 – Aug. 2026

- Built and published a cross-platform Jain worship and puja booking app on Google Play and the App Store, with animated darshan rituals, a Pathshala learning section, and temple puja booking with WhatsApp video delivery.
- Shipped a companion Next.js web app (App Router, Tailwind) sharing one Firebase Realtime Database catalog with the mobile app, so deities, offerings, prices and banners update on both from a single admin edit.
- Integrated Cashfree payments with Cloud Functions that recompute cart totals server-side, reject price mismatches, and verify payment status via webhooks, plus a rate-limited booking lookup.
- Deployed the web app on Firebase App Hosting with ISR-cached, server-rendered pages for crawlable shared links.

Neurological Condition Detection | *Python, Javascript, Tailwind, WebSerial API, REST API* — December 2025

- Developed comprehensive web-based platform designed to assist in the early detection and monitoring of neurological conditions, specifically Parkinson's Disease.
- Integrated hardware sensors (Arduino) with a modern React frontend and a Python/Flask machine learning backend to provide real-time clinical assessments.
- Used pre trained Random Forest and SVM models to classify patient tremor states based on real-time sensor data
- Engineered a real-time data pipeline using the Web Serial API to stream accelerometer and force sensor (FSR) data directly from an Arduino-based wearable glove to a React frontend.

Technical Skills

Languages: JavaScript, Python, C/C++, HTML/CSS, Typescript
Frameworks: React, Node.js, Flask, WordPress, FastAPI, Streamlit, Tailwind CSS
Developer Tools: Git, Vite, REST API, Web Serial API, Claude Code/Codex, Runpod, Netlify, Supabase, Arduino
Libraries: Pandas, NumPy, Scikit-learn, Plotly, Librosa, NLTK, BeautifulSoup
